presents fifty mathematical puzzles and problems encouraging readers to think analytically about mathematical problems

as a student i discovered in our library a thin booklet by frederick mosteller entitled 50 challenging problems in probability it referred to as plementary regular textbook by william feller an introduction to probability theory and its applications

so it took this one along too and started on the rest of mosteller's problems on the train riding home from that evening. I caught on to probability. These two books were not primarily about abstract formalisms but rather about basic modeling ideas and about ways, often extremely elegant ones, to apply those notions to a surprising variety of empirical phenomena. Essentially, these books taught the reader the skill to think probabilistically and to apply simple probability models to real world problems. The present book is in this tradition. It is based on the view that those cognitive skills are best acquired by solving challenging nonstandard probability problems. My own experience, both in learning and in teaching, is that challenging problems often help to develop and to sharpen our probabilistic intuition much better than plain style deductions from abstract concepts.

This book is a collection of over 200 problems that David Singmaster has composed since 1987. Some of the math problems have appeared in his various puzzle columns for BBC radio and TV, Canadian Broadcasting Focus, the UK popular science magazine *Games and Puzzles*, the Los Angeles Times *Micromath*, the *Puzzle a Day* memo pad and the *Weekend Telegraph*. While some of these are already classics, many of the puzzles have not been published elsewhere. Previously puzzle enthusiasts of all ages will find here arithmetic problems, properties of digits, monetary problems, algebra, Diophantine problems, magic figures, sequence problems, logical problems, geometric problems, physics problems, combinatorial problems, geographic problems, calendar problems, clock problems, dissection problems and verbal problems.

Do not worry about your difficulties in mathematics. I can assure you that mine are still greater. Albert Einstein. Everyone has heard students' most common complaint in math class: "Why do I need to learn this? I'll never use it when I'm older." Some of us have even been that complainer. Many people's difficulties with learning math in school follow them into adulthood, by which time they often assume that it's too late to do anything about it. But even though it's true that the average person has no need in daily life to remember what the number for  $\pi$  is and what it represents, that doesn't mean that math serves no purpose for anybody with access to a calculator. In your daily math, veteran math educator Laura Laing lays out a year's worth of exercises meant to get you thinking about math in a different way. Laing's approach breaks down her 366 exercises into seven

categories one for each day of the week number sense algebra geometry application probability statistics logic and grab bag laing s approach treats these math and various number related logic problems as fun brain exercises yes there are equations here but nothing that the average adult even those who always hated math class can t handle there are also graphs geometry statistics and logic problems many of them centered around problems that could occur in real life think of your daily math not as homework but instead as your daily cognitive workout
